

SEWER LIFTSTATION OBSTRUCTIONS

Please do not dispose of non-biodegradable items, and cloths (i.e., **Clorox and disposable wipes - see pictures below**) down the toilet. These items build up over time and cause the sewer lift station pumps to become clogged and overheat, resulting in the pump failing. This could have serious consequences such as raw sewage backing up into resident's homes or sewage overflowing from the lift station storage well and into the street.

Please check what you flush down the toilet and help keep the Municipal sanitary sewer system operating smoothly and efficiently. Your help in this matter is appreciated.

A disassembled pump which overheated and failed due to a build-up of non-biodegradable material.

An example of the type of material causing problems.
