

#### <u>ITEM:</u>

Work Session- Capital Improvement Plan (CIP) Review

#### PREPARED BY:

Tina Goodroad, City Administrator/Development Director

#### POLICY DECISION / ACTION TO BE CONSIDERED:

No action is required; we will be reviewing the draft CIP

#### **BACKGROUND:**

Department heads and staff have been preparing the draft CIP as part of the annual update to the City's Long-Term Plan. Each year we identify projects by fund for a 10-year time frame. Many of the projects time frames are *estimates* and actual will be based on timing of development. Many projects are also listed as shared costs- with developers, county, or other funding sources such as grants. As we update the plan annually, we have the ability to adjust timing. All CIP items require council approval.

Each fund includes the list of projects for the 10-year time frame and estimated cost. Each fund also includes a financing page identifying the revenue for each year. The majority of the CIP is pay as you go.

Many of the projects listed in the CIP directly relate to the City's strategic plan (copy provided in 8-13-19 packet). Please use this as a reference when reviewing the CIP. Without planning for the projects in the CIP it will be difficult to fulfil the city's goals. For example, one of the goals is to *develop comprehensive transportation plan and funding mechanism* with action items to construct and re-construct several streets. This goal can be implemented through projects identified in Fund 414, 480 and 485.

Please review each of the projects and funding sheets prior to the work session. This is a draft plan and can be adjust based on council feedback.

Finally, staff has been working on a first phase plan for Stephens Farm park development based on the master plan (fund 405). This phasing plan helps us to include more accurate estimates for construction. The first phase plan is attached and features trails, aggregate parking area, amenity area near the river and river overlook based on master plan. This phase includes restored prairie, other landscaping and elements that will attract users to the park to enjoy the river.

## **RELATIONSHIP TO COUNCIL GOALS:**

Preparation of the draft CIP meets the Councils goal to annually evaluate and update the Budget, Development Revenue Forecast and Long-Term Plan

#### **RECOMMENDATION:**

No formal action is requested. Staff recommends council discuss the proposed CIP and provide any direction to staff regarding proposed amendments.

Purchase of land (85 acres) for Community Park. Includes first payment in 2019 thru 2024 based on proposed contract for deed.

Completion of Sundance Woods park is scheduled for 2020 to matches bid timing with other park improvements.

River Hills park development is schedule for 2020 and 2021 for total of \$600,000. We have received dedicated land from the developer plus an additional \$125,000 for playground improvements. We received \$25,000 grant. Stephens Farm Park development scheduled for first phase construction for 2021 and 2022.

Timing for Jonquil Trail Crossing was moved to 2020. Council should determine if this is still a priority.

Trail along Pineview Lane between SDLR and 121 will be in 2020 and funded by Three Rivers Park District

Stephens Farm Trail includes first phase construction of internal park trails in 2021

Other trails will be added to the CIP based on the final comp plan. Trails internal to developments are not included on the CIP as they are constructed by developers.

Cost for Zanzibar Lane have been updated for 2019. This has been on the CIP since 2017.

Pineview Lane/CR 121 Intersection- this is a new item for 2020. This will provide a permanent improvement to this intersection to be constructed at the same time as Pineview Lane and Oakview Lane (under one feasibility report). We have commitment from the county for \$700,000 and proposing an MSA advance of \$700,000 for the remaining costs.

Interchange Master Plan Area -this future project includes the necessary street construction to support future development southwest of the interchange. This project will occur when there is development demand and will be a shared cost. Its estimated at 2022 but could very well be bumped depending on development needs.

Zanzibar Lane -125th to SDLR was added for 2022. Depending on need this could be adjusted

Dayton Parkway Extensions reflects extension of the parkway to support future development. Estimated at 2025 for the purposes of planning but will be based on timing of development. Costs will be shared and the city will be seeking grant funds

NW well (backup water source) adjusted to 2019.

NE well was moved up from 2023 to 2021 based on increased demand.

Water Tower Painting Maintenance is a new item in 2020.

NW ground storage was moved to 2023 from 2021.

Added a few projects since the preliminary review including a Water Supply and Distribution Plan in 2022 and a Water Treatment Facility in 2025.

Engineering staff is working hard to shave costs off of the NW Well.

LANDSCAPE PLAN L 1 - 1

## **Engine Twelve Assignment**

Engine 12 is currently located at fire station one, it is assigned to respond as the second engine to any working fire or emergency as requested in the city. Engine 12 is the first truck to respond from station one on all ice rescue calls and the second truck to respond to all water related incidents, because engine twelve carries a compliment of ropes and dry suites. Engine 12 also acts as a backup engine when one of the frontline engines is down for repairs or maintenance, also when other engines are tied up during training and public education events, having three engines ensures we are able to cover the city at all times form both fire stations.

## **Current Engine Twelve**

The current engine 12 is a 1990 ford L8000, this makes this unit 29 years old, which is four years past a realistic replacement age of 25 years. The proposed replacement engine will not arrive for a year after the order date which will put engine twelve over 30 years old at time of replacement. The current engine will not meet the National Fire Protection Association (NFPA) requirements for safety, because the current seatbelts in the rear of the cab are lap belts only. This engine lacks the space needed to store the proper equipment to respond to emergency calls it is assigned. The pump on the engine is rated at 1000 Gallons per minute (GPM) which is no longer effective for todays fires which burn faster hotter and bigger than ever before.

## **Engine Twelve Proposed Replacement**

Engine twelve is proposed to be replaced with a pumper-tanker, this unit will serve dual roles within the city. The pumper-tanker will carry all necessary tools and equipment to preform fire suppression and ice or water rescues as needed. The proposed engine will carry 1700 gallons of water and 30 gallons of class A foam. The pump will be able flow 1500 gallons per minute (GPM) to safely and effectively conduct fire suppression operations. The proposed pumper-tanker will comply with current National Fire Protection Association (NRPA) Safety regulations. The proposed pumper-tanker will also carry a drop tank which is used to fill with water in areas with no hydrants.

The fire department is proposing the replacement of engine twelve to be in the form of a pumper-tanker. The reasons for this proposal are as follows, currently the City of Dayton has hydrants in about five to ten percent of its coverage area. This means we have to set up tanker shuttles when water is needed for fire suppression operations in areas with no fire hydrants. The surrounding cities which have an established water system throughout their city, have eliminated their tankers from their fleet or reduced the tank size to fit the needs of their city or have no plans to replace their current tanker in the future. What this means for us now and in the future, we will have to call for more tankers from farther away to ensure we have enough water to safely and successfully extinguish fires. Calling for tankers from further away will take twenty minutes minimum to get on location. The addition of a pumper-tanker would allow for the extra time needed for additional water to get to the location.

The pumper-tanker would respond as the first engine from station one to any fires in areas with out hydrants because it would have 1700 gallons of water on board vs the 1000 gallons of water currently carried on our engines. This engine would also be the first engine to respond to the interstate once the ramp is installed for any vehicle fires due to no hydrants on the freeway. The pumper-tanker would also continue to serve as a reserve first out engine when another unit is down for maintenance and would serve as the ice rescue and water rescue unit from station one.

#### **Future Plan**

The future plan is for each fire station to have two units with pumps rated for fire suppression and onboard water. This would allow fire calls to be dispatched to a single fire station instead of the current modal which is sending a page out for both fire stations to respond. Going to a single station response will save on wages, fuel and equipment costs as well as future firefighter burnout.
