

Pineview Lane and Oakview Lane Improvements:

City staff is working on plans for a road improvement project along Pineview Lane, CSAH 121 (129th Avenue North), and Oakview Lane. The City of Dayton is partnering with Hennepin County and the Three Rivers Park District to complete these improvements.

This project will include reconstruction of Pineview Lane between 129th Ave N/CSAH 121 (south end) and South Diamond Lake Road (north end). A roundabout is proposed to be constructed at the intersection of CSAH 121 and Pineview Lane. In addition, improvements along the Oakview Lane loop directly east of Pineview Lane will be completed to improve the pavement surface. The proposed project includes roadway improvements, storm sewer construction, and trail connection/improvements. The project will also include construction of a trail along the west side of Pineview Lane. The trail will connect the City's trail along South Diamond Lake Road to the trail system within Elm Creek Park to the south of the intersection of Pineview Lane and CSAH 121.

The project will include significant traffic impacts during the summer of 2020, including closures of the roadways within the project area. Additional details related to construction staging and scheduling, as well as information regarding proposed road closures and detours will be provided in the future. This project is anticipated to start in spring 2020, with substantial completion in fall 2020, and final completion in summer 2021.

Proposed Improvements by Roadway

Below is a description of proposed improvement activities along each roadway.

Pineview Lane:

- Reconstruct the roadway to include concrete curb or a shoulder along the edge of the roadway.
- Pineview Lane will remain a two-lane roadway
- Improve intersection access
 - Construct a roundabout at the intersection of Pineview Lane and CSAH 121.
 - South Diamond Lake Road and CSAH 121. This will include construction of a left turn lane at the northern end of the project.
- Construct a trail along the west side of Pineview Lane, connecting existing trails north and south of the project area.
- Drainage improvements, including the installation of storm sewer, catch basins, and culverts.

CSAH 121/129th Ave N:

- Construct a roundabout at the intersection with Pineview Lane. Currently, topography prevents adequate sight lines for users exiting Pineview Lane and attempting to enter CSAH 121. The roundabout will also allow for safer pedestrian crossing for the proposed trail connection. This is the preferred intersection improvement for both Hennepin County and Three Rivers Park District, as it provides efficiency and safety for all users of this intersection.
- This improvement would also be accompanied by vertical grade corrections to provide proper sight lines for motorists at the intersection.

Oakview Lane:

- Complete street reconstruction, including reconstruction of the full pavement section and installation of a sand drainage layer with subgrade drainage.
- Drainage improvements, including replacing storm sewer infrastructure along Oakview Lane. This primarily includes catch basins and outlets, while stabilizing the ravines that have formed where current stormwater outlets for this roadway. The ravines are proposed to be reinforced with riprap.
